Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note="Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; 1st strand cDNA was prepared from mammary gland tissue from a lactating female, and was then primed with a Not I - Oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library is normalized. Library mas constructed by Bento Soares and M. Fatima Bonaldo. "90 c

/Lab_Luck- Dalve py773D-Pac (Pharmacia) with a modified polylinker; 1st strand cDNA was prepared from mammary gland tissue from a lactating female, and was then primed with a Not I - Oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified py773 vector. Library is normalized. Library was constructed by Bento Soares and M. Fatima Bonaldo. "a 95 c 96 g 102 t

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Jobes 1977 Parabobac (Pharmacia) with a modified polylinker; 1st strand cDNA was prepared from mammary polylinker; 1st strand cDNA was prepared from mammary gland tissue from a lactating female, and was then primed with a Not I - Oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT773 vector. Library is normalized. Library was constructed by Bento Scares and M. Fatima Bonaldo. " 96 c 97 g 100 t

//octe="Vector: pT7T3D-pac (Pharmacia) with a modified polylinker; 1st strand cDNA was prepared from mammary gland tissue from a lactating female, and was then primed with a Not I - oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library is normalized. Library was constructed bento Soares and M. Fatima Bonaldo. " a 101 c 98 g 101 t

                                                                                                                   Submitted (01-33N-2001) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA on Jan 1, 2001 this sequence version replaced gi:11991738.
Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.
                                                                                                                                                                                                                                                                                                                                                                                                             Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions.

                                                                                                                                                                                                                                                                                                                                                                                                                  Submitted (01-JAN-2001) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza; Houston, TX 77030, USA on Jan 1, 2001 this sequence version replaced gi:11991738. Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NOTE: This is a 'working draft' sequence. It currently consists of 30 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                 Jun 16, 2000 this sequence version replaced gi:7263413

Center project name: 1590
Center clone name: 55.38
Center clone name: 55.38
Sequencing vector: M13; M77815; 100% of reads
Chemistry: Dye-primer-amersham; 3% of reads
Assembly program: Phrap; version 0.960/31
Consensus quality: 17767 bases at least Q40
Consensus quality: 177767 bases at least Q40
Consensus quality: 177767 bases at least Q20
Insert size: 182080; sum-of-contigs
Consensus quality: 177767 bases; at least Q20
Insert size: 182080; sum-of-contigs
Quality coverage: 4, 8 in Q20 bases;
Quality coverage: 5.0 in Q20 bases;
Quality coverage: 5.0 in Q20 bases;
Consists of 34 contigs. The true order of the pieces
consists of 34 contigs. The true order of the pieces
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.
